

Efficient Existing Public Buildings: Best Practice Action 1

1-Star

Every active city-owned building in B3 has the necessary information regarding Building Editor provided to the benchmarking system; the City's GreenCorps member is the individual responsible for routinely entering data, but the City has received a CERTs Seed Grant to develop an automated benchmarking program to continue this process after the member's service term is complete. Every site has at least 12 consecutive ongoing months of historical energy use data.

2-Star

As the City has met the 1-Star criterion as well as entering 24 consecutive months of ongoing historical data; in addition, the recent data is validated and corrected by looking at patterns/trends and inconsistencies. After building audits and thermal imaging projects are completed, potential opportunities for energy savings will be identified and upgraded/maintained.
